Operational environments are becoming increasingly challenging, and the need for collaborative platforms to meet those challenges is now. MOSAIC is the most secure, collaborative, and user-friendly situational awareness (SA) tool on the market.

It surpasses conventional user requirements, while remaining adaptable to any domain of operations – and with over 50,000+ missions each year, is tried and tested to the highest standards.

Unlike current situational awareness tools, it's adaptable for covert and partner force distribution, all while keeping ISO 27001 data security standards and advanced encryption at the forefront.

- Operating system agnostic
- Video and image sharing
- Open source intel sharing
- GIS support services
- Interfaces for 3rd party data
- Secure messaging
- Cell, Wi-Fi, Sat-com, and UHF
- Intelligence Overlays
